Steel Leg Tables - Bolt Down Instructions

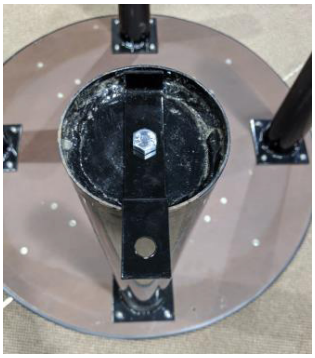

- Lay the table upside down, so the bolt locations are exposed.
- Attach all legs.
- Each leg will come with a single bracket (2 pictures below), and bolt.

- Each table leg will have a threaded hole in the center, inset the bracket as shown below.

- Position the outside tab in the customers preferred orientation. Eg. Pointing away from the table, or pointing towards the center of the table. Then tighten down the bolt.
- Bolt down hole shown as pointed out below.

- After installing all bolt down brackets, flip the table over to its normal standing position. Proceed to mark the floor in the locations of the bolt down holes.

- Drill out the 4 holes in the floor, reposition the table and use customer preferred expansion anchors to attach to the floor.
